

Food Scrap Composting

CR&R Waste and Recycling Services began a food scrap composting program at food establishments in April of this year. This year-long program is funded through a grant from OC Waste and Recycling. Restaurants separate their food scraps into collection containers and transfer the material to larger outdoor carts similar to what is used for recycling at your home. A CR&R truck collects the material and delivers it to a facility where it is turned into high quality compost. Food scraps represent some 40 - 45 % of restaurant waste and the average restaurant throws away more than 50 tons of organic waste in a year. For the entire state, that number increases to 5 million tons.

If you visit one of these establishments please thank them for participating in this pilot program and supporting our mission to reduce waste deposited in the landfill.

Aliso Viejo
