

# Southern California Edison

Southern California Edison Company (SCE) offers many programs that help local governments save energy and money. The programs described below offer rebates and incentives for business and local government customers installing energy-efficient equipment. SCE also offers tools to help identify and monitor your energy usage.

More information on these programs, and more, can be found at <http://www.sce.com/b-rs/> or by calling (800) 736-4777.

## Energy Audits

Take SCE's free online Energy Survey and receive customized energy-efficiency recommendations that can make a difference in your bill. It's easy: Answer a series of questions about your usage, receive a report that lists ways you can save energy and money, and get an estimated cost savings for each energy-saving suggestion. Complete it all at once, or save and return to it when you have time.

## Express Efficiency

This unique program offers SCE business customers generous cash rebates toward the purchase and installation of qualified equipment that improves their facility's energy efficiency. High-efficiency equipment is key to lowering your energy costs and reducing your energy use. SCE's Express Efficiency Program is designed specifically to help you obtain high-efficiency equipment.

## Standard Performance Contract

The SPC program offers financial incentives to offset the capital cost of installing new high efficiency equipment or systems. Project examples may include common retrofits like lighting, HVAC and refrigeration upgrades, or more specialized process improvements and customized equipment replacements. Retrofit or new equipment installations are eligible.

## Savings By Design

This program encourages high-performance nonresidential building design and construction. Savings By Design offers building owners and their design team a wide range of services and incentives.

## Demand Response Programs

SCE offers a variety of Demand Response Programs to help qualifying customers reduce their energy usage during peak times while lowering their electricity costs. Qualifying customers who can reduce power when statewide energy supplies are low may earn financial incentives, and/or other benefits by participating in these programs.
